Allowable Subject Matter

1. Claims 1-3, 6-8, 10, 11, 16-23, 31-42 (renumbered as 1-28) are allowed.
2. The prior art of record fails to teach or suggest the claimed invention individually or in combination the limitation of “the first fence value is independent of any change made to content of the first member of the replica set and is used to resolve a conflict between information in the first member of the replica set and information in the second member of the replica set...changing second meta-data of the second member to indicate a change in the content of the second member and maintaining the second fence value unchanged, wherein the second fence value is independent of any change made to the content of the second member” in claim 1, “each fence value is independent of any change made to content of its associated resource and is used to resolve a conflict between information on the first machine and information on the second machine...maintaining the fence value of the first resource and the fence value of the second resource unchanged” in claim 16, “each fence value being independent of any change made to content of its associated resource and being used to resolve a conflict between information on the first machine and information on the second machine...updating the resource on the machines based on data other than the fence values, wherein the fence values are maintained unchanged” in claim 31, and “the first fence value is independent of any change made to content of the first member of the replica set and is used to resolve a conflict between information on the first machine and information on the second machine...changing second meta-data of the second member of the replica set to indicate a change in the content of the second member and maintaining the second fence value unchanged, wherein the second fence value is independent of any change made to the content of the second member” in claim 34.

3. The closest prior art of record, Norin et al., discloses method for discovery based data recovery in a store and forward replication process using "affinity values", however, the affinity values are not used to resolve a conflict between information in the first member of the replica set and information in the second member of the replica set. Therefore, Norin et al. does not teach or suggest the limitations cited above as being free of any prior art when read in the claims as a whole.

CONCLUSION

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
